

PYCON 2019 IN THAILAND
SPEAKER: SEO, JONGHWA

DJANGO
FOR E-COMMERCE

INTRODUCTION TO MYSELF

▶ Thailand

- ▶ taught in Naresuan University for 2 years
- ▶ worked in Bangkok for 2 years

▶ Korea

- ▶ running my own business
 - ▶ [pincoin.co.kr](https://www.pincoin.co.kr) (based on Django / Python)
 - ▶ # of Users: 35,000+
 - ▶ Monthly Transactions: 13,000+
 - ▶ Monthly PV: 344,000+
 - ▶ Concurrent Visits: ~70
 - ▶ smartstore.naver.com/pincoin (hosted by Naver)
 - ▶ github.com/pincoin/rakmai

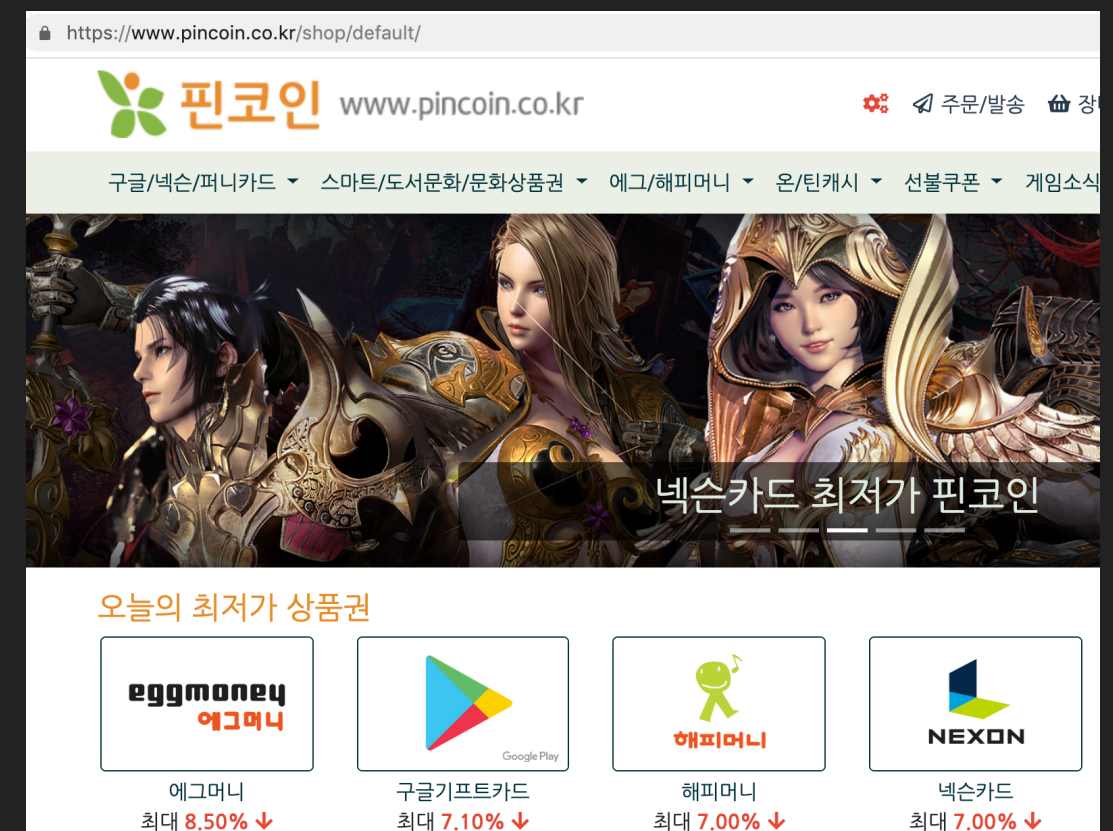

TABLE OF CONTENTS

1. Django / Python
2. E-commerce
3. Django Tech Stack for E-Commerce
4. Background for Django / Python
5. Django Practices for E-Commerce
6. Other Services
7. Conclusion

DJANGO (1/2)

- ▶ The web framework for perfectionists with deadlines
 - ▶ web framework
 - ▶ deadlines
- ▶ Nowadays, we have to learn framework with language.
 - ▶ Django, Flask / Python
 - ▶ Spring / Java
 - ▶ Wordpress, Laravel, Codeigniter / PHP
 - ▶ Rails / Ruby
- ▶ Questions
 - ▶ What do Korea or Thailand use the most?
 - ▶ Which one will you choose?

DJANGO (2/2)

- ▶ Django concerns
 - ▶ Ridiculous fast
 - ▶ It helps develop fast, not performance.
 - ▶ Reassuring secure
 - ▶ It helps avoid common security mistakes.
 - ▶ Exceedingly scalable
 - ▶ It helps scale out.

E-COMMERCE (1/3)

- ▶ Mall types
 - ▶ Open market stores
 - ▶ smartstore.naver.com/pincoin
 - ▶ shoppee.co.th/store
 - ▶ Your domain: subscribe service plan
 - ▶ cafe24.com, makeshop.co.kr, godo.co.kr
 - ▶ Your domain: build your own store using OSS or else
 - ▶ wordpress, opencart, prestashop, magenta
 - ▶ Django / Python!

E-COMMERCE (2/3)

- ▶ Cart Features
 - ▶ Product/Stock management
 - ▶ Options, attributes and complex relationships
 - ▶ Review and ratings
 - ▶ Customer/Membership management
 - ▶ Discount, special offer,
 - ▶ Reward points
 - ▶ Cart
 - ▶ Payment
 - ▶ Shipping
 - ▶ Admin reports

Maintenance and Security

E-COMMERCE (3/3)

▶ Why Django?

- ▶ Django / Python enforces coding conventions / styles.
 - ▶ There should be one – and preferably only one – obvious way to do it
 - ▶ Maintenance, Maintenance, Maintenance!

▶ ORM

▶ Admin page off-the-shelf

▶ Security support: <https://docs.djangoproject.com/en/2.1/topics/security/>

▶ Lots of 3rd party apps support

- ▶ django-allauth
- ▶ django-mptt and django-model-utils
- ▶ django-rest-framework

▶ Rule of Thumb: I was able to build my website by myself thanks to Django.

DJANGO TECH STACK FOR E-COMMERCE (1/4)

- ▶ Django does **NOT** do **EVERYTHING** for service.
 - ▶ PIP packages
 - ▶ OS, Daemons and Frontend
 - ▶ Other Services

DJANGO TECH STACK FOR E-COMMERCE (2/4)

▶ PIP Packages(requirements.txt)

- ▶ django-allauth
- ▶ django-rest-framework
- ▶ django-model-utils
- ▶ django-mptt
- ▶ django-otp
- ▶ django-crispy-forms
- ▶ django-ipware
- ▶ geoip2
- ▶ django-taggit
- ▶ django-import-export

DJANGO TECH STACK FOR E-COMMERCE (3/4)

- ▶ OS, Daemons and Frontend
 - ▶ Ubuntu (AWS Lightsail)
 - ▶ NGINX, uWSGI
 - ▶ PostgreSQL
 - ▶ Memcached
 - ▶ Celery, RabbitMQ
 - ▶ crontab
 - ▶ jQuery 3, Bootstrap 4, FontAwesome 5
 - ▶ Android app to forward SMS payment notification

DJANGO TECH STACK FOR E-COMMERCE (4/4)

- ▶ Other Services
 - ▶ Mailgun
 - ▶ Line notify
 - ▶ Cloudflare WAF
 - ▶ disq.us
 - ▶ Google Analytics
 - ▶ Aligo SMS (KR)

BACKGROUND FOR DJANGO / PYTHON (1/2)

- ▶ Object Oriented Programming
 - ▶ Data encapsulation and Data abstraction
 - ▶ Inheritance and Polymorphism
 - ▶ View Mixins, Templates, Model Inheritance
- ▶ ORM(Object Relation Mapping) - Save from SQL Injection attacks
 - ▶ Table = Class
 - ▶ Record(Row) = Instance(object)
 - ▶ Column(Field) = Member variable

BACKGROUND FOR DJANGO / PYTHON (2/2)

- ▶ Design Patterns <https://github.com/faif/python-patterns>
 - ▶ MVC (model, view, controller) - Model Template View
 - ▶ Decorator (is-a, inheritance)
 - ▶ Composite (has-a, composition)
 - ▶ Observer (signals)
 - ▶ Adapter
 - ▶ Factory
 - ▶ Singleton
- ▶ Test Driven Development www.obeythetestinggoat.com

DJANGO PRACTICES FOR E-COMMERCE (1/10)

▶ Model

▶ Extending abstract model

▶ <https://github.com/pincoin/rakmai/blob/master/rakmai/models.py#L100-L101>

▶ django-mptt : MPTTModel

▶ <https://github.com/pincoin/rakmai/blob/master/rakmai/models.py#L104-L132>

▶ django-model-utils: Choices, TimestampedModel, SoftDeletableModel

▶ <https://github.com/pincoin/rakmai/blob/master/shop/models.py#L25-L29>

▶ Relationships

▶ one-to-one

▶ <https://github.com/pincoin/rakmai/blob/master/member/models.py#L38-L41>

▶ many-to-one (foreign key)

▶ <https://github.com/pincoin/rakmai/blob/master/shop/models.py#L100-L106>

▶ many-to-many

▶ <https://github.com/pincoin/rakmai/blob/master/shop/models.py#L334>

DJANGO PRACTICES FOR E-COMMERCE (2/10)

▶ Forms

▶ Validation (super duper important!)

▶ Cart!

▶ <https://github.com/pincoin/rakmai/blob/master/blog/forms.py#L122-L130>

▶ Model form

▶ <https://github.com/pincoin/rakmai/blob/master/help/forms.py#L101-L115>

▶ Model form for Admin

▶ <https://github.com/pincoin/rakmai/blob/master/shop/forms.py#L7-L28>

▶ Passing arguments to Form

▶ <https://github.com/pincoin/rakmai/blob/master/shop/views.py#L229-L234>

▶ django-crispy-forms

▶ It helps create a simple form easily, but sometimes makes more difficult

▶ <https://github.com/pincoin/rakmai/blob/master/blog/forms.py#L45-L77>

▶ If you've got lots of JS codes, it could be better to render forms manually.

DJANGO PRACTICES FOR E-COMMERCE (3/10)

- ▶ Widgets

- ▶ editors / form assets

- ▶ summernote <https://github.com/pincoin/rakmai/blob/master/rakmai/widgets.py#L57-L71>

- ▶ render html

- ▶ <https://github.com/pincoin/rakmai/blob/master/rakmai/templates/summernote/summernote.html>

- ▶

DJANGO PRACTICES FOR E-COMMERCE (4/10)

▶ Templates

▶ 'extends'

▶ custom template filter

- ▶ currency https://github.com/pincoin/rakmai/blob/master/shop/templatetags/shop_filters.py#L10-L16

▶ custom template tags

- ▶ simple tag https://github.com/pincoin/rakmai/blob/master/shop/templatetags/shop_tags.py#L82-L99
- ▶ recursive tag https://github.com/pincoin/rakmai/blob/master/shop/templatetags/shop_tags.py#L17-L57

DJANGO PRACTICES FOR E-COMMERCE (5/10)

▶ View

▶ Class-based View (CBV) vs. Function-based View(FBV)

- ▶ I don't use FBV.

▶ MRO (Method Resolution Order)

- ▶ List, HostRestricted, LoginRequired, Pageable <https://github.com/pincoin/rakmai/blob/master/shop/views.py#L409>
- ▶ FormView <https://github.com/pincoin/rakmai/blob/master/shop/views.py#L556-L592>

▶ ViewMixins

- ▶ ViewMixins <https://github.com/pincoin/rakmai/blob/master/shop/viewmixins.py#L11-L48>

DJANGO PRACTICES FOR E-COMMERCE (6/10)

▶ REST API

▶ JSON response

- ▶ JsonResponse <https://github.com/pincoin/rakmai/blob/master/shop/views.py#L376-L381>

▶ APIView

- ▶ Response <https://github.com/pincoin/rakmai/blob/master/member/views.py#L526-L533>
- ▶ Serializer <https://github.com/pincoin/rakmai/blob/master/api/serializers.py>
- ▶ Permission <https://github.com/pincoin/rakmai/blob/master/api/permissions.py>

DJANGO PRACTICES FOR E-COMMERCE (7/10)

▶ Security

▶ SSL/TLS

▶ <https://docs.djangoproject.com/en/2.2/topics/security/#ssl-https>

▶ Use Cloudflare

▶ Session

▶ cart <https://github.com/pincoin/rakmai/blob/master/shop/helpers.py#L32-L136>

▶ cart-add <https://github.com/pincoin/rakmai/blob/master/shop/views.py#L326-L329>

DJANGO PRACTICES FOR E-COMMERCE (8/10)

▶ Caching

- ▶ https://github.com/pincoin/rakmai/blob/master/shop/templatetags/shop_tags.py#L62-L79

▶ Middleware

- ▶ <https://github.com/pincoin/rakmai/blob/master/rakmai/middleware.py>
- ▶ <https://github.com/pincoin/rakmai/blob/master/shop/middleware.py>

DJANGO PRACTICES FOR E-COMMERCE (9/10)

▶ Celery

▶ RabbitMQ

▶ Celery workers

▶ Register celery app

▶ https://github.com/pincoin/rakmai/blob/master/sandbox/__init__.py

▶ Celery tasks

▶ <https://github.com/pincoin/rakmai/blob/master/sandbox/celery.py>

▶ Tasks

▶ <https://github.com/pincoin/rakmai/blob/master/shop/tasks.py>

DJANGO PRACTICES FOR E-COMMERCE (10/10)

- ▶ Admin Page

- ▶ <https://github.com/pincoin/rakmai/blob/master/shop/admin.py>

- ▶ How develop

- ▶ Developers work with customers using models and admin pages.
 - ▶ Designers work with customers using templates.
 - ▶ Finally, developers and designers collaborate by working with views.

OTHER SERVICES (1/3)

- ▶ OS

- ▶ VPS

- ▶ AWS Lightsail

- ▶ VULTR

- ▶ Digital Ocean

- ▶ Cloud

- ▶ AWS

- ▶ Azure

OTHER SERVICES (2/3)

- ▶ Cloudflare
 - ▶ DNS (Hide your server IP)
 - ▶ SSL/TLS
 - ▶ CDN, minify, caching
 - ▶ Rewrite Rule
 - ▶ Web Application Firewall

OTHER SERVICES (3/3)

- ▶ Mail Service
 - ▶ Mailgun, G-Suite
 - ▶ Legacy
 - ▶ Postfix
 - ▶ Dovecot
 - ▶ Roundcube

CONCLUSION (1/3)

- ▶ Django can be used to develop any web services.
 - ▶ Rapid development
 - ▶ Security
 - ▶ Scalability
 - ▶ Software maintainability

CONCLUSION (2/3)

▶ References

- ▶ Django official document

docs.djangoproject.com/en/2.2/

- ▶ Two scoops of Django 1.11

www.twoscoopspress.com

- ▶ Test-Driven Development with Python, 2nd
